

Location: Ireland.

Client: Mincon

Application: Corrosion due to salt and humidity while shipping,

Project Start Date: May 2016

Mincon, founded in 1977 in Shannon, Ireland, are one of the world's leading manufacturers of quality and precision parts for hard rock drilling.

Their commitment to delivering a superior product to the customer is at the core of them becoming "The Driller's Choice".

As almost 90% of their output is shipped by sea, Mincon needed a solution to the issue of corrosion due to salt and humidity.

By applying Lanotec HD (liquid lanolin), Mincon were able to eliminate 100% of corrosion issues and ensure that their products arrive in the pristine condition in which they left the factory.

Lanotec HD gives lasting protection for all metals during shipping as well as throughout the working life in the most challenging conditions.
